

CtrlRequestClass

```
classDiagram
    class CtrlRequestClass
    class ClassList {
        -classRequests: Request[0...*]
        +addClassRequest(classrequest: Request): void
        +removeClassRequest(classrequest: Request): void
        +acceptClassRequest(classrequest: Request): void
    }
    CtrlRequestClass --> ClassList
```

The diagram shows a class named **CtrlRequestClass** on the left, which has two empty compartments below its name. An arrow points from the right side of this class to the **ClassList** class on the right. The **ClassList** class has three compartments: the top one contains the class name, the middle one contains a private attribute `-classRequests: Request[0...*]`, and the bottom one contains three public methods: `+addClassRequest(classrequest: Request): void`, `+removeClassRequest(classrequest: Request): void`, and `+acceptClassRequest(classrequest: Request): void`.

ClassList

-classRequests: Request[0...*]

+addClassRequest(classrequest: Request): void
+removeClassRequest(classrequest: Request): void
+acceptClassRequest(classrequest: Request): void
