

InstitutionUpdater

```
classDiagram
    class InstitutionUpdater
    class SessionController {
        +checkAuthorization(user: String): bool
    }
    InstitutionUpdater --> SessionController
```

The diagram shows two class boxes. The left box is for 'InstitutionUpdater' and has three empty compartments. The right box is for 'SessionController' and has a third compartment containing the method '+checkAuthorization(user: String): bool'. A horizontal arrow points from the right side of the 'InstitutionUpdater' box to the left side of the 'SessionController' box, indicating a dependency.

SessionController

+checkAuthorization(user: String): bool
