

AuthenticationRouter

```
classDiagram
    class AuthenticationRouter
    class LoggerOut {
        +logout(): void
    }
    class AuthenticationData
    AuthenticationRouter ..> LoggerOut
    LoggerOut ..> AuthenticationData
```

The diagram illustrates a dependency between three classes. On the left is the **AuthenticationRouter** class, represented by a rectangle with three horizontal compartments. A horizontal arrow points from its right side to the **LoggerOut** class in the center. The **LoggerOut** class is a rectangle with three compartments; the top one contains the class name, the middle one is empty, and the bottom one contains the method `+logout(): void`. Another horizontal arrow points from the right side of the **LoggerOut** class to the **AuthenticationData** class on the right. The **AuthenticationData** class is a rectangle with three horizontal compartments, with the top one containing the class name and the others empty. All classes have a light gray shadow to their right.

LoggerOut

+logout(): void

AuthenticationData
