

## Student

+requestClass(institutionname: String, classname: String, academicyear: int): void

CtrlRequestClass

```
classDiagram
    class Student {
        +requestClass(institutionname: String, classname: String, academicyear: int): void
    }
    class CtrlRequestClass
    Student <|-- CtrlRequestClass
```

The diagram illustrates a class hierarchy. At the top is the 'Student' class, which has a public method '+requestClass(institutionname: String, classname: String, academicyear: int): void'. Below it is the 'CtrlRequestClass' class. A vertical line with an open arrowhead points from 'CtrlRequestClass' up to 'Student', indicating that 'CtrlRequestClass' inherits from 'Student'.
